Today tourism plays an influential role in international transactions as one of the main principles of global development. Therefore, developing tourism activities and introducing a part of tourism attractions of Iran, especially villages it is possible to improve the level of promoting these spaces and also to rebuild the economical and social body of them in order to do some positive activities. In addition, developing rural tourism one can help the process of rural development. In this study it is tried to study economical, social, and environmental impacts of tourism in Rijab village tin Kermanshah province as a village with high tourism ability respecting situation and possibilities. Population of this study contains 800 individuals of villagers that 260 people out of them were selected randomly. Result showed that tourism in this village in economical dimension was downplaying influential respectively based on increasing of income, increasing the price of land and housing, decreasing social class gab, employment and so on. Furthermore, in social dimension respecting improvement of villagers cooperation and integration, changing in the type of villagers cloth, attracting the most Norowz and summer travelers, and also developing external village relationships with neighbor villages and so on. Also, in bio environmental dimension respecting preventing air pollution in the area, precluding wastage of plant types and developing sub-structural services played the most influential role. Results showed that about 70% of villagers in this area have a positive attitude to tourism and rural tourism and some factors like obviating obstacles of unemployment, interaction and villagers cooperation, and government support in the case of tourism and ... had a positive and significant relationship to attitude of villagers toward rural tourism in the area
