Agriculture section extensively needs proficiency to achieve development, while its graduated students are unemployment. It seems that by entrepreneurship training courses, we help them to create a new business in agriculture, which it could make development in this field easier, but its precondition is a necessity to knowing their motivation to persuade them for agricultural entrepreneurship. The purpose of this research was to assess the students' tendency to agricultural entrepreneurship and factors which affect their tendency, in Shiraz University agricultural college senior students. Our study sample was number of 100 students from five different of agriculture's disciplines, and we used questionnaire as data gathering instrument. Our questionnaire face validity has been confirmed by number of extension experts in Shiraz University. After the data statistical analyses by SPSS software, the results showed that the motivation of students for entrepreneurship is less than average score of our measurement scale. Additionally, results shown that there is no significant difference between students' motivation to entrepreneurship in different groups of students (groups include some variables: gender, sex, scores, disciplines, marital status and living location). The student highest degree of motivation to entrepreneurship tendency belong to personality, Identity, welfare and perfection motivation, respectively.

Keywords: Entrepreneurship, Motivation, Students, Agriculture Engineering.
