Given the proper use and dispose of waste Khdaday these resources as a human duty and any person directly or indirectly associated with it. Thus, according to public participation in environmental protection is of high importance and validity. In this regard, the overall aim of this Pvhsh importance of community participation in environmental protection projects were conducted. The population of this province was all agricultural experts (N = 142). Using census sampling, questionnaires were sent to all persons who ultimately Mvrnzr 105 questionnaires were returned and analyzed. The main tool was a questionnaire that bad, its validity by a panel of experts and its reliability was confirmed by Cronbach's alpha coefficient ( $= 0/88\alpha$ ). The results showed that the importance of community participation in conservation projects is the optimal use of facilities, material and immaterial. Reinforce a sense of ownership in the people.
